Feed Forward Network

Pre-processed :

The features are standardized.

Input layers:

The model consists of an input layer with 128 neurons, followed by two hidden layers with 64 and 32 neurons, all using the ReLU activation function.

The output layer:

Equal to the number of classes (10), using softmax activation function for multi-class classification.

Training:

10 epochs, a batch size of 32, and a validation split of 20%.

Result:

The model achieved a training accuracy of around 85.31% by the end of 10 epochs.

The validation accuracy shows an improvement from 36.88% to 66.25%.

The accuracy on the test set is **61.5%**.
